

Customer Support Knowledge Base — Subscriptions & Plans

Synthetic support articles covering plans, trials, renewals, seats, usage limits, upgrades, downgrades, and subscription administration.

Article count: 40

KB-001 — Choosing a monthly plan

Common question: How do I handle choosing a monthly plan?

Resolution: Choosing a monthly plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-002 — Choosing an annual plan

Common question: How do I handle choosing an annual plan?

Resolution: Choosing an annual plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-003 — Upgrading a plan

Common question: How do I handle upgrading a plan?

Resolution: Upgrading a plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-004 — Downgrading a plan

Common question: How do I handle downgrading a plan?

Resolution: Downgrading a plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-005 — Changing plan effective date

Common question: How do I handle changing plan effective date?

Resolution: Changing plan effective date should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-006 — Plan proration

Common question: How do I handle plan proration?

Resolution: Plan proration should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-007 — Renewal date

Common question: How do I handle renewal date?

Resolution: Renewal date should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-008 — Automatic renewal

Common question: How do I handle automatic renewal?

Resolution: Automatic renewal should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-009 — Canceling renewal

Common question: How do I handle canceling renewal?

Resolution: Canceling renewal should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before

retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-010 — Reactivating a canceled plan

Common question: How do I handle reactivating a canceled plan?

Resolution: Reactivating a canceled plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-011 — Trial eligibility

Common question: How do I handle trial eligibility?

Resolution: Trial eligibility should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-012 — Trial expiration

Common question: How do I handle trial expiration?

Resolution: Trial expiration should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-013 — Trial conversion to paid plan

Common question: How do I handle trial conversion to paid plan?

Resolution: Trial conversion to paid plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-014 — Trial cancellation

Common question: How do I handle trial cancellation?

Resolution: Trial cancellation should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-015 — Plan limits

Common question: How do I handle plan limits?

Resolution: Plan limits should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-016 — Usage limits

Common question: How do I handle usage limits?

Resolution: Usage limits should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-017 — Overage notifications

Common question: How do I handle overage notifications?

Resolution: Overage notifications should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-018 — Usage reset date

Common question: How do I handle usage reset date?

Resolution: Usage reset date should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-019 — Plan feature comparison

Common question: How do I handle plan feature comparison?

Resolution: Plan feature comparison should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-020 — Feature unavailable on plan

Common question: How do I handle feature unavailable on plan?

Resolution: Feature unavailable on plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-021 — Adding seats

Common question: How do I handle adding seats?

Resolution: Adding seats should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-022 — Removing seats

Common question: How do I handle removing seats?

Resolution: Removing seats should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-023 — Changing seat count

Common question: How do I handle changing seat count?

Resolution: Changing seat count should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-024 — Organization plan administration

Common question: How do I handle organization plan administration?

Resolution: Organization plan administration should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-025 — Team member invitation

Common question: How do I handle team member invitation?

Resolution: Team member invitation should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-026 — Removing a team member

Common question: How do I handle removing a team member?

Resolution: Removing a team member should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-027 — Seat reassignment

Common question: How do I handle seat reassignment?

Resolution: Seat reassignment should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-028 — Unused seats

Common question: How do I handle unused seats?

Resolution: Unused seats should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-029 — Plan billing owner

Common question: How do I handle plan billing owner?

Resolution: Plan billing owner should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-030 — Subscription ownership transfer

Common question: How do I handle subscription ownership transfer?

Resolution: Subscription ownership transfer should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-031 — Subscription paused

Common question: How do I handle subscription paused?

Resolution: Subscription paused should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-032 — Subscription resumed

Common question: How do I handle subscription resumed?

Resolution: Subscription resumed should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-033 — Plan migration

Common question: How do I handle plan migration?

Resolution: Plan migration should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-034 — Legacy plan

Common question: How do I handle legacy plan?

Resolution: Legacy plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-035 — Promotional plan

Common question: How do I handle promotional plan?

Resolution: Promotional plan should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-036 — Promotion expiration

Common question: How do I handle promotion expiration?

Resolution: Promotion expiration should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-037 — Renewal price change

Common question: How do I handle renewal price change?

Resolution: Renewal price change should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-038 — Subscription invoice

Common question: How do I handle subscription invoice?

Resolution: Subscription invoice should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-039 — Subscription payment failure

Common question: How do I handle subscription payment failure?

Resolution: Subscription payment failure should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-040 — Subscription access after cancellation

Common question: How do I handle subscription access after cancellation?

Resolution: Subscription access after cancellation should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.
