

Customer Support Knowledge Base — Privacy, Security & Data

Synthetic support articles covering privacy controls, data requests, account security, credential safety, permissions, and incident reporting.

Article count: 40

KB-001 — Privacy settings overview

Common question: How do I handle privacy settings overview?

Resolution: Privacy settings overview should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-002 — Data collection preferences

Common question: How do I handle data collection preferences?

Resolution: Data collection preferences should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-003 — Communication preferences

Common question: How do I handle communication preferences?

Resolution: Communication preferences should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-004 — Data export request

Common question: How do I handle data export request?

Resolution: Data export request should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-005 — Data deletion request

Common question: How do I handle data deletion request?

Resolution: Data deletion request should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-006 — Account data access

Common question: How do I handle account data access?

Resolution: Account data access should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-007 — Correcting profile data

Common question: How do I handle correcting profile data?

Resolution: Correcting profile data should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-008 — Data retention

Common question: How do I handle data retention?

Resolution: Data retention should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-009 — Cookie preferences

Common question: How do I handle cookie preferences?

Resolution: Cookie preferences should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before

retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-010 — Browser storage and privacy

Common question: How do I handle browser storage and privacy?

Resolution: Browser storage and privacy should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-011 — Tracking preferences

Common question: How do I handle tracking preferences?

Resolution: Tracking preferences should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-012 — Analytics opt-out

Common question: How do I handle analytics opt-out?

Resolution: Analytics opt-out should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-013 — Security notifications

Common question: How do I handle security notifications?

Resolution: Security notifications should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-014 — Suspicious activity report

Common question: How do I handle suspicious activity report?

Resolution: Suspicious activity report should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-015 — Unauthorized account access

Common question: How do I handle unauthorized account access?

Resolution: Unauthorized account access should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-016 — Credential compromise

Common question: How do I handle credential compromise?

Resolution: Credential compromise should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-017 — Phishing message

Common question: How do I handle phishing message?

Resolution: Phishing message should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-018 — Fake support contact

Common question: How do I handle fake support contact?

Resolution: Fake support contact should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-019 — One-time code safety

Common question: How do I handle one-time code safety?

Resolution: One-time code safety should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-020 — Recovery code safety

Common question: How do I handle recovery code safety?

Resolution: Recovery code safety should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-021 — Session security

Common question: How do I handle session security?

Resolution: Session security should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-022 — Active session review

Common question: How do I handle active session review?

Resolution: Active session review should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-023 — Trusted device removal

Common question: How do I handle trusted device removal?

Resolution: Trusted device removal should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-024 — API credential security

Common question: How do I handle api credential security?

Resolution: API credential security should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-025 — Third-party application access

Common question: How do I handle third-party application access?

Resolution: Third-party application access should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-026 — Connected application removal

Common question: How do I handle connected application removal?

Resolution: Connected application removal should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-027 — Organization data controls

Common question: How do I handle organization data controls?

Resolution: Organization data controls should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-028 — Admin access

Common question: How do I handle admin access?

Resolution: Admin access should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-029 — Data visibility

Common question: How do I handle data visibility?

Resolution: Data visibility should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-030 — Profile visibility

Common question: How do I handle profile visibility?

Resolution: Profile visibility should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-031 — Shared workspace privacy

Common question: How do I handle shared workspace privacy?

Resolution: Shared workspace privacy should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-032 — File access permissions

Common question: How do I handle file access permissions?

Resolution: File access permissions should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-033 — Audit log review

Common question: How do I handle audit log review?

Resolution: Audit log review should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-034 — Security incident reporting

Common question: How do I handle security incident reporting?

Resolution: Security incident reporting should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-035 — Privacy request status

Common question: How do I handle privacy request status?

Resolution: Privacy request status should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-036 — Identity verification for privacy requests

Common question: How do I handle identity verification for privacy requests?

Resolution: Identity verification for privacy requests should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-037 — Data processing questions

Common question: How do I handle data processing questions?

Resolution: Data processing questions should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-038 — Regional privacy rights

Common question: How do I handle regional privacy rights?

Resolution: Regional privacy rights should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-039 — Account closure and data deletion

Common question: How do I handle account closure and data deletion?

Resolution: Account closure and data deletion should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.

KB-040 — Privacy support escalation

Common question: How do I handle privacy support escalation?

Resolution: Privacy support escalation should be handled through the supported account, product, or service workflow. Review the current status, follow the documented recovery or configuration steps, and confirm the result before retrying.

Recommended steps: Verify the relevant settings or status; reproduce the issue once using the official workflow; record any exact error message or reference number.

Escalation: Escalate when the documented workflow fails, the issue persists after the basic checks, or account ownership, billing, privacy, or security review is required.
